Part 1:
Service capability framework for paediatric cancer
1. Overview of the service capability framework

1.1 Objectives
The objectives of this framework are to:
- Describe a coordinated system of statewide paediatric and adolescent cancer care
- Support a sustainable model of care with an efficient use of resources across health services
- Support and advocate for patient safety through describing minimum recommended capability while providing care as close to home as possible
- Provide a clear and consistent language across statewide services.

1.2 Context
Treating a child or adolescent with cancer comes with a high degree of risk. Despite overall survival rates of greater than 80 per cent, treatment modalities for paediatric cancer are often prolonged and complicated and have a narrow therapeutic index. Side effects of systemic therapy for treating cancer can be severe, including acute organ toxicities, prolonged immunodeficiency and infection. Providing therapy and managing toxicities can be extremely demanding on health services that do not have the capability to accept and manage these. High-quality evidence-based care is required not only to deliver therapy and supportive care but is essential in the diagnosis phase, post-treatment surveillance and long-term follow-up care.

The rarity and complexity of child and adolescent cancer provides a real challenge in delivering optimal care. As a result of this, care is managed and directed from specialised health services to ensure higher case volumes under a 'shared care' model to provide supportive care closer to home when it is safe to do so. Because of the challenges it presents, shared care services need to have a defined scope of practice in caring for this patient population. This field also demands a high degree of participation in clinical trials to meet research targets both nationally and internationally. Clinical trials promote collaboration but also increase demands on health services to remain compliant in the conduct of trials. Paediatric cancer services need to meet the needs of the child, delivering a family-centred model of care in an environment that is safe and appropriate for children and adolescents.

Evidence shows that best outcomes demand a well-coordinated, timely, multidisciplinary approach requiring effective collaboration of health services working together as a team. Integrated care is fundamental to paediatric cancer care and service delivery.

1.3 Developing the service capability framework
Each year in Victoria approximately 190 children are diagnosed with cancer. Approximately 30 per cent of these children are from regional Victoria and have the ability to participate in a shared care model. The Victorian Paediatric Integrated Cancer Service (PICS) supports the development of an integrated, coordinated, multidisciplinary approach to providing paediatric cancer care and treatment to children and adolescents with cancer in Victoria. Developing a service capability framework that describes minimum standards for health services providing care and treatment to children and adolescents with cancer has been highlighted as a priority in the PICS Strategic Plan 2013–16.

The PICS supports the development of an integrated, coordinated, multidisciplinary approach to providing paediatric cancer services that draws on the best available evidence and builds on state, national and international experience of success. This framework has been developed, in consultation with PICS partners, to support this integrated approach.

1.4 The function of the service capability framework
The emphasis of this framework is to define the level of paediatric cancer care and oncology services provided at various health services across different time points in a child's care.

The framework will support health services to plan, develop and deliver a high level of safe and effective paediatric cancer care within an agreed scope of practice. By documenting minimum service requirements, health services will be assisted to deliver services that meet the local needs of the community and build confidence in shared care referrals between health services.

The six levels of complexity for service provisions used within other capability frameworks in Victorian health services were considered when developing this framework. However, levels 1 and 2 (generally defined as low-complexity ambulatory care such as primary practice) have not been incorporated into this framework due to the complexity of delivering paediatric cancer care.

| LEVEL 6 | Specialist-high complexity |
| LEVEL 5 | Specialist- moderate to high complexity |
| LEVEL 4 | Moderate Complexity-Regional (higher critical mass, limited chemotherapy) |
| LEVEL 3 | Low to Moderate Complexity- Regional Shared Care (supportive care only) |
| LEVEL 2 | Low Complexity Inpatient (excluded) |
| LEVEL 1 | Low Complexity Ambulant (excluded) |

"An essential first step to providing high quality health care is to define it."
2. Factors influencing the level of services required

Definitive diagnosis and risk stratification for paediatric and adolescent cancers should only be conducted at a level 5 service (with access to a level 6 service) or at a level 6 service.

The appropriateness of shared care will be considered by a level 5 or 6 service at the time of the multidisciplinary treatment planning meeting.

Factors influencing service requirements in paediatric cancer include:

- any child requiring stem cell therapy as part of their treatment plan
- any child receiving radiotherapy as part of a multimodal treatment plan
- the degree of perceived toxicities and level of supportive care interventions, defined by treatment protocols and discussions at the multidisciplinary meeting
- place of residence and distance from a level 5 or 6 service

- family social situation and level of cultural and linguistic diversity
- age of the child, particularly if aged under 12 months
- distinct supportive care considerations for adolescent patients
- concurrent morbidities and pre-existing medical conditions
- mandatory competency requirements for delivering specialised therapy such as clinical trial demands
- critical mass in the health service delivering paediatric cancer care
- unmet minimum service level requirements in a health service delivering paediatric cancer care.

3. Description of the service capability framework

3.1 Preamble

For the purposes of this framework, the definition of paediatrics is a child or adolescent under the age of 16 years.

The combination of two medical specialties – paediatrics and oncology – may be considered a ‘super specialty’ service. The risks associated with delivering therapy to children can result in significant side effects such as sepsis and organ toxicities, which may be compounded when health services providing care do not meet the minimum clinical requirements to support that service.

Childhood cancer is rare. This means that the diagnosis, staging, treatment and surveillance of childhood cancer requires the leadership of a specialised paediatric oncology tertiary referral centre throughout the patient journey with a formalised, shared care model for patients that do not live near a level 5 or 6 service. The ‘high-volume effect’ in tertiary treatment centres has been shown to improve survival outcomes in the paediatric oncology population.6

Each service level within this framework is described in terms of the following dimensions:

- time points and level of complexity of care
- infrastructure
- specialty services
- workforce
- education and research
- quality and clinical governance
- service links and networks.

The appendices provide more information about specialty services that are essential to paediatric cancer care.

Health services providing or intending to provide treatment or supportive care to children and adolescents with cancer in Victoria are advised to review the levels within this framework, engaging their treating teams with health service executives to work together to build a system within their service that provides safe care to children and adolescents with cancer.
3.2 Level 3 service: description and total activity

A level 3 service will provide a shared care service that delivers supportive care to children and adolescents with cancer, under the guidance of a level 5 or 6 service. The main aim of a level 3 service is to provide safe and coordinated shared care closer to home, in collaboration with a level 5 or 6 service.

Time points Complexity of care

<table>
<thead>
<tr>
<th>Time points</th>
<th>Complexity of care</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diagnosis</td>
<td>Communication and consultation with a level 5 or 6 service for all pre-diagnosis tests and investigations undertaken. Definitive diagnosis, staging and/or risk assessment will be provided at a level 5 or 6 service.</td>
</tr>
<tr>
<td>Treatment and supportive care</td>
<td>Provides supportive care measures along the paediatric oncology pathway for patients and their families within a shared care model with a level 5 or 6 service. A level 3 service does not provide chemotherapy or radiotherapy.</td>
</tr>
<tr>
<td>Surveillance</td>
<td>Provides limited tests, investigations and appointments in collaboration with a level 5 or 6 service during surveillance.</td>
</tr>
<tr>
<td>Survivorship</td>
<td>Provides limited tests, investigations and appointments in collaboration with a level 5 or 6 service in the long-term follow-up of children following treatment for cancer.</td>
</tr>
<tr>
<td>Palliative care</td>
<td>Support, as guided by the level 5 or 6 service, for managing the care of children with cancer where there is no longer a curative or control regimen.</td>
</tr>
</tbody>
</table>

Infrastructure

<table>
<thead>
<tr>
<th>Infrastructure</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Emergency care</td>
<td>An emergency department with paediatric trauma and resuscitation facilities with the ability to stabilise acutely unwell children and adolescents, with appropriate escalation and transfer guidelines to a level 5 or 6 service. Immediate availability of staff on site who are competent in accessing a central venous access device to ensure timely administration of fluid, blood products, antibiotics and other life-saving interventions.</td>
</tr>
<tr>
<td>Environment</td>
<td>Child- and family-friendly inpatient and outpatient environment in line with the Royal Australasian College of Physicians. Standards of care for children and adolescents in health services. {7}</td>
</tr>
<tr>
<td>Intensive care</td>
<td>Documented processes for inter-hospital transfers of acutely unwell patients to a level 5 or 6 paediatric intensive care centre.</td>
</tr>
<tr>
<td>Information technology</td>
<td>Access to pathology, radiology and hospital patient records available to all staff collocated in the clinical areas. Dedicated IT support personnel on site. Systems in place to support the communication of shared paediatric oncology care across services. Videoconference systems to support telehealth opportunities with a level 5 or 6 service. Ability to access multidisciplinary meetings hosted by a level 5 or 6 service.</td>
</tr>
<tr>
<td>Inpatient services</td>
<td>Paediatric inpatient service with appropriate isolation room for caring for the immunocompromised child.</td>
</tr>
<tr>
<td>Outpatient services</td>
<td>Dedicated paediatric ambulatory service with capacity to deliver supportive care and outreach oncology clinics.</td>
</tr>
</tbody>
</table>

Specialty services

<table>
<thead>
<tr>
<th>Specialty services</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Multidisciplinary meeting</td>
<td>Access to a multidisciplinary meeting structure hosted by a level 5 or 6 service to enable discussions about new diagnoses within its catchment area. As necessary, be able to access centralised discussions across critical time points in the patient’s care. (See Appendix 5 for level 3 service requirements.)</td>
</tr>
<tr>
<td>Homecare</td>
<td>Home-based healthcare program for children and adolescents, with referrals from the cancer service to local services. Homecare staff have access to paediatric oncology education programs and clinical governance.</td>
</tr>
<tr>
<td>Laboratory</td>
<td>Access to real-time laboratory services for managing the supportive care and surveillance of paediatric cancer patients. (See Appendix 2 for level 3 service requirements.)</td>
</tr>
<tr>
<td>Medical imaging</td>
<td>Provides timely access to paediatric radiologists and radiographers with paediatric experience, as well as access to an anaesthetic service to deliver these interventions in real time to younger children or infants. (See Appendix 4 for level 3 service requirements.)</td>
</tr>
<tr>
<td>Pharmacy</td>
<td>On-site pharmacy with designated staff to provide a paediatric service. (See Appendix 7 for level 3 service requirements.)</td>
</tr>
<tr>
<td>Palliative care</td>
<td>Provision of, or access to, a paediatric palliative care program.</td>
</tr>
<tr>
<td>Procedural pain</td>
<td>Staff with demonstrated evidence of learning to support children and adolescents with cancer during medical procedures.</td>
</tr>
<tr>
<td>Telehealth</td>
<td>Dedicated resources to participate in telehealth consultations with level 5 and 6 services.</td>
</tr>
<tr>
<td>Translation services</td>
<td>Timely access to translation services to ensure effective communication of care and education for linguistically diverse children and their families.</td>
</tr>
</tbody>
</table>

Workforce

<table>

<td>Infection control</td>
<td>Timely access to staff responsible for infection control. Compliance with national hand hygiene initiative and access to a staff vaccination program.</td>
</tr>
</tbody>
</table>
### Allied health
- **Nutrition**: Dietitian with paediatric responsibilities available during business hours.
- **Social work**: Social worker with paediatric responsibilities available during business hours and on-call social work service 24 hours a day.

### Administrative support
- Secretarial support available during business hours in both inpatient and outpatient settings to support coordination of care between services and to support documentation relating to patient care.

### Education and research
- **Education**
  - **Medical**: Access to a level 5 or 6 service to support mentoring of consultant paediatricians managing children and adolescents with cancer.
  - **Nursing**: Access to an education program for nursing staff in caring for children with cancer (see Appendix 6 for level 3 service requirements).
  - **Allied health**: Access to an allied health education program that supports caring for children and adolescents with cancer.
- **Patient and family**: Access to education materials for patients and families provided by level 5 and 6 services.

### Quality and clinical governance
- **Guidelines**: Access to level 5 or 6 clinical guidelines for providing supportive care to children with cancer.
- **Patient review**: Access to a multidisciplinary meeting structure coordinated and hosted by a level 5 or 6 service to be able to contribute to and discuss patients within the service catchment, as required.
- **Dedicated IT support personnel on site**: Demonstrated process for morbidity and mortality review (as necessary) as part of a quality process, with demonstrated communication channels to the level 5 or 6 service for adverse event reporting.
- **Quality activity**: Demonstrated health service quality or clinical governance unit to support any quality initiatives in paediatric oncology.

### Service links and networks
- **Community engagement**: Relationships with relevant local community support groups for children and families with cancer and/or chronic/acute illness.
- **Consumer engagement**: Evidence of the use of consumer engagement in the local health service.
- **Inter-hospital linkages**: Demonstrated linkages with other service levels, including referral mechanisms both in and out of the hospital.
- **PICS**: Integration of services into the PICS model in Victoria to strengthen quality, consistency and integration of cancer care.
- **Medical imaging**: Access to image-sharing software for communicating medical images between sites.

### 3.3 Level 4 service: description and total activity
A level 4 service will provide a shared care service that delivers supportive care to children and adolescents with cancer. A level 4 service may also provide a low-complexity chemotherapy service to children and adolescents with cancer, under the guidance of a level 5 or 6 service. The main aim of a level 4 service is to provide safe and coordinated shared care closer to home, in collaboration with a level 5 or 6 service.

<table>
<thead>
<tr>
<th>Time points</th>
<th>Complexity of care</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Diagnosis</strong></td>
<td>Communication and consultation with a level 5 or 6 service for all pre-diagnosis tests and investigations undertaken. Definitive diagnosis, staging and/or risk assessment will be provided at a level 5 or 6 service.</td>
</tr>
<tr>
<td><strong>Treatment and supportive care</strong></td>
<td>Provides a low-complexity day case paediatric chemotherapy service, as required, within a shared care model with a level 5 or 6 service. Provides supportive care measures along the paediatric oncology treatment pathway for patients and their families, defined within a shared care model with a level 5 or 6 service.</td>
</tr>
<tr>
<td><strong>Surveillance</strong></td>
<td>Provides limited tests, investigations and appointments in collaboration with a level 5 or 6 service during surveillance.</td>
</tr>
<tr>
<td><strong>Survivorship</strong></td>
<td>Provides limited tests, investigations and appointments in collaboration with a level 5 or 6 service in the long-term follow-up of children following treatment for cancer.</td>
</tr>
<tr>
<td><strong>Palliative care</strong></td>
<td>Support, as guided by the level 5 or 6 service, for managing the care of children with cancer closer to home where there is no longer a curative or control regimen.</td>
</tr>
</tbody>
</table>

### Infrastructure
- **Emergency care**: An emergency department with paediatric trauma and resuscitation facilities with the ability to stabilise acutely unwell children or adolescents, with appropriate escalation and transfer guidelines to a level 5 or 6 service. Immediate availability of staff on site who are competent in accessing a central venous access device to ensure timely administration of fluid, blood products, antibiotics and other life-saving interventions.
- **Environment**: Child- and family-friendly inpatient and outpatient environment in line with the Royal Australasian College of Physicians: Standards of care for children and adolescents in health services.
- **Intensive care**: Documented processes for inter-hospital transfers of acutely unwell patients to a level 5 or 6 paediatric intensive care centre.
- **Information technology**: Access to pathology, radiology and hospital patient records available to all staff collocated in the clinical areas. Dedicated IT support personnel on site. Systems in place to support the communication of shared paediatric oncology care across services, including the communication of the care of children in clinical trials. Videoconference systems to support telehealth opportunities with a level 5 or 6 service. Ability to access multidisciplinary meetings hosted by a level 5 or 6 service.
- **Inpatient services**: Dedicated paediatric ward with an appropriate isolation room for caring for an immunocompromised child.
- **Outpatient services**: Dedicated paediatric ambulatory department with capacity to deliver a low-complexity chemotherapy and supportive care service for children and adolescents with cancer. Area available to host regional outreach paediatric oncology clinics.
### Specialty services

<table>
<thead>
<tr>
<th>Service</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Multidisciplinary meeting</td>
<td>Access to a multidisciplinary meeting structure hosted by a level 5 or 6 service, to enable discussions about new diagnoses within its catchment area. As necessary, be able to access centralised discussions across critical time points in the patient’s care (see Appendix 5 for level 4 service requirements).</td>
</tr>
<tr>
<td>Chemotherapy and biotherapy</td>
<td>Provides a low-complexity paediatric chemotherapy service including (in collaboration with the level 5 or 6 service) the necessary governance, education and infrastructure.</td>
</tr>
<tr>
<td>Clinical trials</td>
<td>Established pathways to communicate any therapies, clinical incidents or other requirements to the level 5 or 6 service, as required by the study group, for children enrolled in clinical trials.</td>
</tr>
<tr>
<td>Homecare</td>
<td>Home-based healthcare program for children and adolescents, with referrals from the cancer service to local services. Homecare staff have access to paediatric oncology education programs and clinical governance.</td>
</tr>
<tr>
<td>Laboratory</td>
<td>Access to real-time laboratory services for managing supportive care and surveillance for the paediatric oncology patient (see Appendix 2 for level 4 service requirements).</td>
</tr>
<tr>
<td>Medical imaging</td>
<td>Provision of, or timely access to, paediatric radiologists and radiographers with paediatric experience, as well as access to an anaesthetic service to deliver these interventions in real time to younger children or infants (see Appendix 4 for level 4 service requirements).</td>
</tr>
<tr>
<td>Pharmacy</td>
<td>On-site pharmacy with designated staff to provide paediatric services, with access to local oncology pharmacy and established links to a level 5 or 6 service for providing low-complexity chemotherapy (see Appendix 7 for level 4 service requirements).</td>
</tr>
<tr>
<td>Palliative care</td>
<td>Provision of, or access to a paediatric palliative care program.</td>
</tr>
<tr>
<td>Procedural pain</td>
<td>Staff with demonstrated evidence of learning to support children and adolescents with cancer during medical procedures.</td>
</tr>
<tr>
<td>Telehealth</td>
<td>Dedicated resources to participate in telehealth consultations with level 5 and 6 services.</td>

<td>Access to education materials for patients and families, provided by level 5 and 6 services.</td>
</tr>
</tbody>
</table>
### Quality and clinical governance

- **Guidelines**
  - Access to level 5 or 6 clinical guidelines for providing low-complexity chemotherapy and supportive care management for children and adolescents with cancer.

- **Patient review**
  - Access to a multidisciplinary meeting structure coordinated and hosted by a level 5 or 6 service to discuss, as required, patients within the local service catchment.
  
  - Demonstrated process for morbidity and mortality review as part of a quality process (as necessary), with collaboration and communication with the level 5 or 6 service for adverse event reporting.

- **Quality activity**
  - Demonstrated health service quality or clinical governance unit to support any quality initiatives in paediatric oncology.

### Service links and networks

#### Clinical trials
- Mechanisms in place for reporting any local chemotherapy encounters to the level 5 or 6 service for patients enrolled in clinical trials.

#### Community engagement
- Relationships with relevant local community support groups for children and families with cancer and/or chronic/acute illness.

#### Consumer engagement
- Evidence of the use of consumer engagement in the local health service.

#### Inter-hospital linkages
- Demonstrated linkages with other service levels, including referral mechanisms both in and out of the hospital.

#### PICS
- Integrated of services into the PICS model in Victoria to strengthen quality, consistency and integration of cancer care.

#### Medical imaging
- Access to image-sharing software for communicating medical imaging between sites.

### 3.4 Level 5 service: description and total activity

**A level 5 service will provide comprehensive care for the majority of paediatric oncology presentations within its catchment area, with direct links to a level 6 service. A level 5 service is recognised as a primary treatment centre and will provide diagnostic services and/or management of at least 30 new patients per year.**

<table>
<thead>
<tr>
<th>Time points</th>
<th>Complexity of care</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Diagnosis</strong></td>
<td>Provision of, or timely referral pathways for all tests and investigations to complete the definitive diagnosis and risk assessment of all malignancies in children and adolescents, including participation at diagnosis with a centralized multidisciplinary meeting hosted by a level 6 service.</td>
</tr>
<tr>
<td><strong>Treatment and supportive care</strong></td>
<td>Provision of, or timely referral pathways for all therapeutic interventions in the management of paediatric cancer including chemotherapy, biotherapy, radiotherapy and surgery, in both the inpatient and outpatient setting. New and investigative therapies and supportive care interventions may be initially introduced within a shared care collaborative model with a level 6 service. All care requiring the use of a haematopoietic stem cell transplant (HSCT) service as an adjunct to treatment for cancer in children will be either referred to or shared with a level 6 service. Enrolment and coordination of paediatric oncology patients in clinical trials. Provides all supportive care measures along the paediatric oncology treatment pathway for patients and their families. Adolescents with ‘adult-type’ malignancies should have links to or advice from adult oncology and the relevant multidisciplinary team, where appropriate.</td>
</tr>
<tr>
<td><strong>Surveillance</strong></td>
<td>Provides all tests, investigations and appointments according to relevant protocols and, for children following HSCT, in collaboration with the level 6 service. Established referral pathways for the shared care of children undergoing surveillance with other level centres.</td>
</tr>
<tr>
<td><strong>Survivorship</strong></td>
<td>Provides services required for long-term follow-up of children following treatment for cancer. Takes responsibility to develop treatment pathways in survivorship.</td>
</tr>
<tr>
<td><strong>Palliative care</strong></td>
<td>Provision of, or timely access to services required for managing cancer in children and adolescents where there is no longer a curative or control regimen.</td>
</tr>
</tbody>
</table>

### Infrastructure

#### Emergency care
- A paediatric emergency department with paediatric trauma and resuscitation facilities with the ability to diagnose and stabilise acutely unwell children or adolescents. Immediate availability of staff on site who are competent in accessing a central venous access device to ensure timely administration of fluid, blood products, antibiotics and other life-saving interventions.

#### Environment
- Child- and family-friendly inpatient and outpatient environment in line with the Royal Australasian College of Physicians Standards of Care for Children and Adolescents in Health Services.

#### Intensive care
- Paediatric intensive care unit providing comprehensive care including complex multi-system life support for an indefinite period to children younger than 16 years of age, in line with the College of Intensive Care Medicine minimum standards.
Service capability framework

Information technology
Electronic access to tests, investigations, policies, procedures and patient records (as applicable). Dedicated IT support personnel on site. Systems in place to support the electronic communication of shared care across services. Videoconference references to support the delivery of telehealth as well as the hosting of multidisciplinary meetings across health services. Data systems integrated with relevant cancer registries and clinical trial partners to facilitate information sharing.

Inpatient services
Dedicated paediatric oncology ward environment with appropriate facilities to provide sufficient isolation of patients from airborne pathogens (such as HEPA filtration and positive/negative pressure rooms), delivering comprehensive paediatric cancer care across each of the time points.

Outpatient services
Dedicated paediatric oncology outpatient department with the capacity to deliver comprehensive chemotherapy and supportive care across each of the time points. Dedicated procedure rooms and isolation rooms for managing infectious ambulatory patients with an identified waiting area located away from the general population.

Family accommodation
Suitable access to accommodation options for caregivers available within or close to the institution.

Specialty services

Multidisciplinary meeting
Supports and contributes to a multidisciplinary meeting structure presenting all new patients at diagnosis and, as necessary, across critical time points in their care (see Appendix 5 for level 5 service requirements).

Chemotherapy and biotherapy
Provides a paediatric chemotherapy and biotherapy service to meet the demands of all treatment protocols delivered in the service, with demonstrated referral pathways and collaboration with a level 6 service for new investigative therapies or haematopoietic stem cell transplantation, that falls outside scope. Provides the necessary governance, education and infrastructure to deliver local chemotherapy and biotherapy, as well as having resources to support the introduction of any new agents, in collaboration with a level 6 service.

Clinical trials
Provides a service to coordinate paediatric oncology clinical trials, including ethics submission processes, maintenance of membership with participating study groups and support of the clinical team in clinical trial enrolment and governance compliance.

Homecare
Timely access to home-based healthcare, with direct links and referrals from the cancer service to local and statewide services, including access for homecare staff to paediatric oncology education programs and clinical governance documentation.

Laboratory
Provides ‘real-time’ referral pathways to the diagnostic testing, clinical and consultative laboratory services required in to deliver paediatric oncology care (see Appendix 2 for level 5 service requirements).

Medical imaging
Provides a medical imaging service, including a paediatric radiologist and anaesthetist, to meet the needs of paediatric oncology care (see Appendix 4 for level 5 service requirements).

Pharmacy
On-site pharmacy with paediatric expertise and established linkages with a level 6 paediatric oncology pharmacy (see Appendix 7 for level 5 service requirements).

Palliative care
Provides a paediatric palliative care service supporting both inpatient and community-based care.

Psychosocial
Provides services to meet the practical, social and mental health needs of children with cancer and their families (see Appendix 8 for level 5 service requirements).

Procedural pain
Paediatric therapist(s) with training and expertise to provide a comprehensive procedural pain management program.

Radiation oncology
Provides timely referral pathways to and specialised treatments for paediatric radiation oncology that meets the demands of providing care to children (see Appendix 9 for level 5 service requirements).

Telehealth
Dedicated resources to participate in telehealth consultation with level 3, 4 and 6 services.

Translation services
Timely access to translation services to ensure effective communication and education of care to linguistically diverse children and their families, as required.

Transition
Timely referral pathways to adult health services for transitioning adolescent patients.

Workforce

Medical
Paediatric oncology
A specialist paediatric oncologist is appointed as head of the department. Specialist paediatric oncologist available on-call 24 hours a day.

Radiation oncology
Timely access to a radiation oncologist with paediatric subspecialty during business hours. Access to a radiation oncologist 24 hours a day and to phone consultations with a radiation oncologist with a paediatric subspecialty.

Surgery
Timely access to on-site paediatric specialty surgical services including orthopaedics, neurosurgery, cardiothoracic, ophthalmology, otolaryngology, plastics, urology, maxillofacial and general paediatric surgery expertise.

Anaesthetics
Paediatric anaesthetic consultant available on-call 24 hours a day. Anaesthetic registrar on site 24 hours a day.

Medical specialties
Timely access to on-site paediatric consultant physicians including neurology, cardiology, nephrology, respiratory, ophthalmology, endocrinology, genetics, infectious diseases, psychiatry, rehabilitation, pathology, haematology, immunology, fertility and transfusion.

Medical imaging
Paediatric radiologist available on site during business hours and on-call 24 hours a day.

Oral health
Timely access to on-site paediatric dentist.

Nursing
Paediatric oncology
Identified nursing lead in cancer services. Paediatric nursing staff across all shifts in the outpatient setting with paediatric chemotherapy competence.

Radiation oncology
Timely access to an experienced paediatric oncology nurse responsible for radiation oncology.

Surgery
Nursing staff with postoperative paediatric surgical experience, including neurosurgery.
Pharmacy

Paediatric pharmacists with a dedicated oncology portfolio available during business hours and on-call after hours.

Infection control

Timely access to staff responsible for infection control. Compliance with national hand hygiene initiative and access to staff vaccination.

Clinical trials

Dedicated staff responsible for the enrolment, coordination and management of paediatric oncology clinical trials, including an identified lead responsible for governance and reporting compliance.

Mental health

Paediatric psychologist responsible for providing a mental health service to children and adolescents with cancer and their families.

Allied health

Allied health

Timely access to paediatric specific allied health services on site including speech pathology, occupational therapy, prosthetics, physiotherapy.

Nutrition

Dietitian responsible for paediatric oncology available during business hours.

Procedural pain

Timely access to experienced, on-site staff to teach and deliver procedural pain management strategies.

Social work

Social workers with experience in paediatric oncology available during business hours and on-call 24 hours a day.

Administrative support

Secretarial support available during business hours in both inpatient and outpatient settings to support coordination of care between services and support documentation relating to patient care.

Education and research

Education

Medical

Collaborates with the level 6 service in developing and delivering a paediatric oncology education agenda to medical staff. Demonstrated orientation, training and credentialling program for junior medical staff. Provides professional development opportunities for all medical staff.

Nursing

Collaborates with the level 6 service in developing and delivering a paediatric oncology education program to nursing staff. Demonstrated orientation, training and credentialling program for junior nursing staff. Engagement at both the state and the national level in improving nursing education in paediatric oncology. Professional development opportunities for all nursing staff.

Allied health

Collaborates with a level 6 service in delivering support and education to allied health staff in paediatric oncology. Professional development opportunities for allied health staff.

Patient and family

Provides leadership and support in the review and development of an education program tailored for patients and their families.

Research

Actively supports innovation in research in paediatric oncology. Works with the level 6 service and national and international bodies in the development and translation of research into the clinical setting.

Quality and clinical governance

Guidelines

Collaborates with the level 6 service in developing and implementing evidence-based clinical guidelines addressing the management of key interventions and supportive care in paediatric oncology, ensuring consistency of care across service levels.

Patient review

Active participation in a multidisciplinary meeting structure, to discuss all new patients and at critical time points in their care, as required. Provides a locally hosted comprehensive care multidisciplinary meeting structure to discuss ongoing care of patients, including their psychosocial care and interventions. Demonstrated process for morbidity and mortality review as part of a quality improvement process.

Quality activity

Participation in quality initiatives, including documented, regular quality meetings with key stakeholders, with reportable actions and outcomes. Staff on site who are responsible for quality coordination, collaborating with a level 6 service in establishing quality measures for paediatric oncology services, as well as measuring compliance to quality initiatives.

Service links and networks

Clinical trials

Active membership and accreditation with national and international study groups, with established referral mechanisms for the conduct and coordination of paediatric oncology clinical trials.

Community engagement

Demonstrated relationships with established community support groups for children and families with cancer.

Consumer engagement

Evidence of consumer engagement in the cancer service with attendance on relevant steering groups and committees.

Inter-hospital linkages

Demonstrated linkages with other service levels and reporting bodies, including referral mechanisms both in and out of the hospital.

PICS

Integration of services into the PICS model in Victoria to strengthen quality, consistency and integration of cancer care.

Medical imaging

Access to electronic image sharing software for the communication of medical images between sites.
3.5 Level 6 service: description and total activity

A level 6 service is a statewide referral centre for paediatric oncology. A level 6 service is recognised as a primary treatment centre and will provide diagnostic services and/or management of at least 100 diagnoses per year from the local catchment as well as referrals from other geographical regions. A level 6 service provides statewide, national and international leadership in paediatric oncology, including research, clinical guidance, and policy development. A level 6 service will also assess and manage risk in new therapies and supportive care interventions, providing leadership and planning for other service levels.

<table>
<thead>
<tr>
<th>Time points</th>
<th>Complexity of care</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diagnosis</td>
<td>Provision of, or timely referral pathways for all tests and investigations to complete the definitive diagnosis and risk assessment of all malignancies in children and adolescents.</td>
</tr>
<tr>
<td>Treatment and</td>
<td>Provides all tests, investigations and appointments according to the respective protocol delivery map for all paediatric malignancies and following HSCT.</td>
</tr>
<tr>
<td>supportive care</td>
<td>Establishes referral pathways for the shared care of children undergoing surveillance with other level centres.</td>
</tr>
<tr>
<td>Surveillance</td>
<td>Provides all services required for ongoing long-term follow-up of children following treatment for cancer. Takes responsibility in developing treatment pathways in survivorship.</td>
</tr>
<tr>
<td>Survivorship</td>
<td>Provides all supportive care measures along the paediatric oncology treatment pathway for patients and their families.</td>
</tr>
<tr>
<td>Palliative care</td>
<td>Provides timely access to referral pathways for all services required for managing cancer in children and adolescents where there is no longer a curative or control regimen.</td>
</tr>
<tr>
<td>Infrastructure</td>
<td>A paediatric emergency department with paediatric trauma and resuscitation facilities with the ability to diagnose and stabilise acutely unwell children or adolescents. Immediate availability of staff on site who are competent in accessing a central venous access device to ensure timely administration of fluid, blood products, antibiotics and other life-saving interventions.</td>
</tr>
</tbody>
</table>

Additional information:
- Hematopoietic stem cell transplant (HSCT) service
- Multidisciplinary team, where appropriate
- Adolescents with ‘adult-type’ malignancies should have links to or advice from adult oncology and the relevant multidisciplinary team, where appropriate.

Specialty services

- Multidisciplinary meeting: Provides leadership in hosting and coordinating a multidisciplinary meeting structure to discuss all new malignant cancer diagnoses and, as necessary, across critical time points in their care as required, across all service levels (see Appendix 5 for level 6 service requirements).
- Chemotherapy and biotherapy: Provides a comprehensive paediatric chemotherapy and biotherapy service to meet the demands of all treatment plans across all paediatric oncology diagnoses, including necessary governance, education and infrastructure, in both the inpatient and the outpatient setting, as well as having resources to introduce new therapies.
- Clinical trials: Provides a service to coordinate paediatric oncology clinical trials (including phase 1, 2 and 3). Statewide leadership in generating ethics submission processes, maintenance of membership with participating study groups and supporting the clinical team in their delivery. A level 6 service will also provide leadership in paediatric oncology clinical trials, at both the statewide and the national level, supporting enrolment and governance compliance (see Appendix 1 for level 6 service requirements).
- Homecare: Timely access to home-based healthcare, with direct links and referrals from the cancer service to local and statewide services, as well as providing homecare staff access to paediatric oncology education programs, policies and procedures.
- Laboratory: Provides ‘real-time’ referral pathways to the diagnostic testing, clinical and consultative laboratory services required to deliver paediatric oncology care (see Appendix 2 for level 6 service requirements).
- Medical imaging: Provides a medical imaging service, including a paediatric radiologist and anaesthetist to meet the needs of paediatric oncology care (see Appendix 4 for level 6 service requirements).
- Pharmacy: Provides a paediatric oncology pharmacy service that offers guidance and leadership for all service levels in chemotherapy and biotherapy (see Appendix 7 for level 6 service requirements).
- Palliative care: Provides an on-site dedicated palliative care service for both inpatient and community-based care.
- Psychosocial: Provides services to meet the practical, social and mental health needs of children with cancer and their families (see Appendix 8 for level 6 service requirements).

Information technology

- Electronic access to tests, investigations, policies, procedures and patient records (as applicable).
- Dedicated IT support personnel on site.
- Systems in place to support the electronic communication of shared care across services.
- Videoconference systems to support the delivery of telehealth as well as the hosting of multidisciplinary meetings between health services. Data systems integrated with relevant cancer registries and clinical trial partners to facilitate information sharing.

Inpatient services

- Dedicated paediatric oncology ward with appropriate facilities to provide sufficient isolation of patients from airborne pathogens (such as HEPA filtration and positive/negative pressure rooms), delivering comprehensive paediatric oncology care across each of the time points.

Outpatient services

- Dedicated paediatric oncology outpatient department with capacity to deliver a comprehensive ambulatory chemotherapy and supportive care service across each of the time points, with dedicated procedure rooms, isolation rooms for managing infectious ambulatory patients as well as an identified waiting area separately located from the rest of the population for patients following a bone marrow transplant.
Procedural pain
Paediatric therapist(s) with training and expertise to provide a comprehensive procedural pain and management program.

Radiation oncology
Provides timely referral pathways to specialized treatments for paediatric radiation oncology that meets the demands of providing care to children (see Appendix 9 for level 6 service requirements).

Telehealth
Timely access to a service to support telehealth consultations with other level services in Victoria.

Translation services
Timely access to translation services to ensure effective communication of care and education for culturally and linguistically diverse children and their families.

Transition
Timely referral pathways to adult health services for transitioning adolescent patients.

Workforce

Medical
Paediatric oncology
A specialist paediatric oncologist is appointed as head of the department. Specialist paediatric oncologist available on-call 24 hours a day. Paediatric HSCT specialty consultant available on-call 24 hours a day.

Surgery
Timely access to on-site paediatric specialty surgical services including orthopaedics, neurosurgery, cardiothoracic, ophthalmology, otolaryngology, plastics, urology, maxillofacial and general paediatric surgery expertise.

Radiation oncology
Timely access to a radiation oncologist with a paediatric subspecialty during business hours. Access to a radiation oncologist 24 hours a day and to phone consultations with a radiation oncologist with a paediatric subspecialty.

Anaesthetics
Paediatric anaesthetic consultant available on-call 24 hours a day. Paediatric anaesthetic registrar available on site 24 hours a day.

Medical specialties
Timely access to on-site paediatric consultant physicians including neurology, cardiology, nephrology, respiratory, ophthalmology, endocrinology, genetics, infectious diseases, psychiatry, rehabilitation, pathology, haematology, immunology, fertility and transfusion.

Medical imaging
Paediatric radiologist available on site during business hours and on-call 24 hours a day.

Nursing
Paediatric oncology
Identified nursing lead in cancer services. Paediatric nursing staff across all shifts in the outpatient setting with paediatric chemotherapy competence. Paediatric nursing staff across all shifts in the inpatient setting with demonstrated paediatric chemotherapy and HSCT nursing competence. (See Appendix 6 for level 6 service requirements.)

Radiation oncology
Timely access to an experienced paediatric oncology nurse responsible for radiation oncology.

Surgery
Nursing staff with postoperative paediatric surgery experience, including neurosurgery.

Pharmacy
Paediatric pharmacist with dedicated oncology portfolio available during business hours and on-call after hours.

Infection control
Timely access to staff responsible for infection control. Compliance with national hand hygiene initiative and access to staff vaccination.

Clinical trials
Dedicated staff responsible for the enrolment, coordination and management of paediatric oncology clinical trials, including an identified lead responsible for governance and reporting compliance.

Mental health
Paediatric psychologist for providing a mental health service to children and adolescents with cancer and their families.

Allied health
Allied health
Timely access to paediatric specific allied health services on-site including speech pathology, occupational therapy, prosthetics, physiotherapy.

Nutrition
Dietitian responsible for paediatric oncology available during business hours.

Procedural pain
Timely access to experienced, on-site staff to teach and deliver procedural pain management strategies.

Social work
Social workers with experience in paediatric oncology available during business hours and on-call 24 hours a day.

Administrative support
Secretarial support available during business hours in both the inpatient and the outpatient settings to support coordination of care between services and support documentation relating to patient care.

Education and research

Education
Medical
Provides leadership to all levels of service in developing and delivering an up-to-date paediatric oncology education program to medical staff. Provides an orientation, training and credentialling program for junior medical staff. Provides professional development opportunities for all medical staff.

Nursing
Provides leadership to all levels of service in developing and delivering an up-to-date paediatric oncology education program to nursing staff. Provides an orientation, training and credentialling program for junior nursing staff. Engagement at both the state and the national level in improving nursing education in paediatric oncology. Provides professional development opportunities for all nursing staff.

Allied health
Provides leadership to all levels in supporting education to allied health staff in paediatric oncology. Provides professional development opportunities for allied health staff.

Patient and family
Provides leadership and support in the review and development of an education program tailored for patients and their families.

Research
Provides leadership at a statewide level in supporting innovations in research in paediatric oncology. Works with national and international bodies to develop and translate research into the clinical setting.
Appendix 1: Minimum clinical trial requirements for Victorian health services providing paediatric cancer care

Rationale
The low incidence of cancer in children highlights the need for active participation in national and international trials to achieve significant enrolment numbers in research. The dramatic decrease in mortality in childhood cancer has been a result of cooperative group research. As targeted therapies and tailored therapies become the new paradigm of care, trials will focus on smaller groups, making the need to collaborate internationally more important. Developing local infrastructure to support the conduct of international trials, and in turn improve outcomes for all children, is an essential task for health services. Level 5 and 6 services must have an active clinical trials unit/service. Shared care facilities must be able to demonstrate linkages to a level 5 or 6 clinical trials service.

Appendices: Minimum specialty service requirements

<table>
<thead>
<tr>
<th>Minimum requirements</th>
<th>Service level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maintenance of active membership with cooperative study groups in paediatric oncology</td>
<td>6</td>
</tr>
<tr>
<td>Affiliation with cooperative study groups via primary treatment centre (chemotherapy delivery)</td>
<td>5</td>
</tr>
<tr>
<td>Dedicated staff trained in data management to support cooperative research</td>
<td>4</td>
</tr>
<tr>
<td>Oncology pharmacy staff available to support clinical trials</td>
<td>3</td>
</tr>
<tr>
<td>Identified lead of the clinical trials unit/service with experience in cooperative research</td>
<td>3</td>
</tr>
<tr>
<td>Trained nursing staff on site to support clinical trials in phase one and two studies</td>
<td>3</td>
</tr>
<tr>
<td>Active institutional ethics or governance review committee with oversight of chemotherapy</td>
<td>3</td>
</tr>
<tr>
<td>Consultant oncologist identified as principal investigator for cooperative study groups</td>
<td>3</td>
</tr>
<tr>
<td>Capability to transfer information for communication and documentation of care between primary treatment centre and shared care services</td>
<td>3</td>
</tr>
<tr>
<td>Demonstrated online linkages to cooperative study groups</td>
<td>3</td>
</tr>
<tr>
<td>IT infrastructure (or access to) to manage and record the treatment plan electronically</td>
<td>3</td>
</tr>
<tr>
<td>Standard operating procedures to ensure good clinical practice, including ethics submission processes, adverse event reporting and specimen procurement</td>
<td>3</td>
</tr>
<tr>
<td>Resources for the clinical trials unit/service to provide a mentoring and educational role to disseminate trials information to the health service, in particular the introduction of novel therapies</td>
<td>3</td>
</tr>
<tr>
<td>Active participation of clinical trials unit/service staff in the multidisciplinary structure of the department, with a mechanism to discuss trials enrolment</td>
<td>3</td>
</tr>
<tr>
<td>Procedure for documenting and communicating key adverse events/incidents of those on clinical trials</td>
<td>3</td>
</tr>
</tbody>
</table>

Benefits
A well-resourced, active clinical trials unit/service will support the delivery of cooperative trials in paediatric oncology and support study adherence. Participation within a multidisciplinary meeting structure will ensure opportunities for enrolment are available for all Victorian children. Ongoing commitment to ensure collaboration with cooperative study groups nationally and internationally will support improving outcomes and survival rates of childhood cancer within the paediatric oncology community as a whole. IT linkages and shared databases will ensure real-time communication of trials and promote the shared care of patients across health services in Victoria.
Appendix 2: Minimum laboratory requirements for Victorian health services providing paediatric cancer care

Rationale
Specialised laboratory services are required to provide a timely diagnosis and support risk stratification for delivering appropriate therapy as soon as possible in the diagnostic phase. Treatment interventions, such as chemotherapy, place children at risk of immunodeficiency, sepsis and acute side effects. Health services need to ensure their laboratory services meet the needs of all children. Ongoing surveillance of disease and therapies provided by specialist techniques are often required throughout the treatment plan. A specialised, accredited laboratory service is also a key part of a stem cell transplant service.

<table>

<tr>
<td>Timely access to post-allogeneic HSCT DNA chimerism monitoring techniques</td>
<td></td>
</tr>
<tr>
<td>Immediate transfusion support for patients undergoing allogeneic stem cell</td>
<td></td>
</tr>
<tr>
<td>transplantation</td>
<td></td>
</tr>
</tbody>
</table>

Benefits
Access to timely, specialised accurate laboratory services concentrated within primary treatment centres to increase patient volumes, will effectively reduce delays to diagnosis, support treatment and improve outcomes. Timely access to laboratory services to manage the side effects of cancer therapy will promote safe care and reduce morbidity and mortality.

Appendix 3: Minimum requirements for managing late effects in Victorian health services providing paediatric cancer care

Rationale
Eighty per cent of children diagnosed with cancer survive their disease; however, it is important to monitor the risk of long-term effects. Studies have reported that three-quarters of childhood survivors experience at least one chronic medical condition in adulthood.11,12 Late effects of cancer may include (but are not limited to) organ dysfunction, impaired growth/development, impaired cognitive function, fertility issues and reduced quality of life.11,12 Early detection and intervention of late effects is necessary to preserve long-term health. Many childhood survivors are unaware of their past medical treatment, complicating their health management as adults. No single approach is appropriate for all survivors; however, it is recommended that a risk-stratified approach to care with responsibility for high-risk patients be available within the level 5 or 6 service and low to standard risk patients, shared, as required, with a level 3 or 4 service.

<table>
<thead>
<tr>
<th>Minimum requirements</th>
<th>Service level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Identified ‘late effects’ service</td>
<td>6 5 4 3</td>
</tr>
<tr>
<td>Identified paediatric oncologist engaged in late-effects/long-term follow-up</td>
<td></td>
</tr>
<tr>
<td>Identified specialist nurse engaged in late-effects/long-term follow-up</td>
<td></td>
</tr>
<tr>
<td>Demonstrated access to, and relationships with, other medical specialties (adult</td>
<td></td>
</tr>
<tr>
<td>and paediatrics) including endocrinology, neurology, audiology, cardiology,</td>
<td></td>
</tr>
<tr>
<td>respiratory, renal, reproductive medicine and radiation oncology</td>
<td></td>
</tr>
<tr>
<td>Demonstrated referral pathways to and relationships with adult survivorship services</td>
<td></td>
</tr>
<tr>
<td>Demonstrated access to social work services</td>
<td></td>
</tr>
<tr>
<td>Demonstrated access to mental health services</td>
<td></td>
</tr>
<tr>
<td>Demonstrated access to dietary services</td>
<td></td>
</tr>
<tr>

<td></td>
</tr>
<tr>
<td>Access to appropriate diagnostic monitoring including (but not limited to) ECG,</td>
<td></td>
</tr>
<tr>
<td>basic laboratory, pulmonary functioning, audiology, medical imaging, hormone levels</td>
<td></td>
</tr>
<tr>
<td>and bone mineral density monitoring</td>
<td></td>
</tr>
<tr>
<td>Treatment summaries are developed for all patients entering long-term follow-up</td>
<td></td>
</tr>
<tr>
<td>Demonstrated access to a long-term follow-up service</td>
<td></td>
</tr>
</tbody>
</table>

Benefits
Early identification and interventions for patients at high risk of late effects will improve health outcomes for childhood cancer survivors. Educational resources and treatment summaries will assist adult survivors of childhood cancer to better manage their health and communicate their care needs. Early psychological, educational, dietary and social interventions will contribute to improved quality of life for survivors, and their families.
Appendix 4: Minimum medical imaging requirements for Victorian health services providing paediatric cancer care

Rationale
A medical imaging service provides critical diagnostic and staging information, as well as evaluating response to therapy. Timely access to medical imaging at critical time points in a child’s treatment plan is crucial. Medical imaging is also important beyond therapy for monitoring disease recurrence. Timely access to an appropriately skilled paediatric medical imaging service is also crucial in supportive care, particularly in evaluating infection. Maintaining close relationships with the oncology department in adopting new techniques and approaches to care through clinical trials may reduce the frequency and type of imaging, reducing cumulative radiation exposure and psychological distress.

Benefits
An up-to-date paediatric medical imaging service will support prompt diagnosis and staging of all paediatric cancers by the level 5 or 6 service. Medical imaging is crucial in managing supportive care by providing diagnostic information to support prompt interventions in managing an unwell child. Using a PACS will help ensure rapid communication of clinical information between health services. A PACS may also reduce the cumulative radiation dosage by reducing the duplication of images taken across health services.

Appendix 5: Minimum requirements for a multidisciplinary meeting structure for Victorian health services providing paediatric cancer care

Rationale
A multidisciplinary meeting (MDM) offers a consistent and collaborative approach to paediatric oncology treatment planning. A multidisciplinary approach to paediatric oncology plays an important role in providing high-quality healthcare and forms the basis of leading institutional recommendations. A MDM provides a platform to bring together experts from all medical disciplines irrespective of their location, and has been shown to improve the quality of care provided.

Minimum requirements

<table>
<thead>
<tr>
<th>Minimum requirements</th>
<th>Service level</th>
</tr>
</thead>
<tbody>
<tr>
<td>The MDM will have a central theme of prospective treatment planning at the point of diagnosis</td>
<td>+</td>
</tr>
<tr>
<td>All Victorian children with a new malignant cancer diagnosis will be discussed at a MDM</td>
<td>+</td>
</tr>
<tr>
<td>A peer leader identified within the MDM with strong leadership and facilitation skills will chair the meeting</td>
<td>+</td>
</tr>
<tr>
<td>A meeting coordinator will be identified to support meeting interface, attendance and documentation of outcomes</td>
<td>+</td>
</tr>
<tr>
<td>Level 3 or 4 treating teams will have access to the MDM</td>
<td>+</td>
</tr>
<tr>
<td>Resources are allocated for support to gather relevant materials prior to the meeting</td>
<td>+</td>
</tr>
<tr>
<td>A MDM inter-hospital structure is acknowledged and supported by hospital executive</td>
<td>+ + +</td>
</tr>
<tr>
<td>A room within the health service is suitable for conducting MDMs</td>
<td>+</td>
</tr>
<tr>
<td>Access to video/teleconference facilities, including high-speed internet, is available within the meeting room</td>
<td>+ + +</td>
</tr>
<tr>
<td>Standards for managing and hosting inter-hospital video/teleconferencing are agreed across health services</td>
<td>+ + +</td>
</tr>
<tr>
<td>Resources are allocated for the ability to project and share data across the internet including patient records, pathology slides, medical images and shared databases</td>
<td>+ + +</td>
</tr>
<tr>
<td>A MDM will supplement the disease-specific and comprehensive supportive care multidisciplinary meeting structure of the level 3 and 6 centres</td>
<td>+</td>
</tr>
<tr>
<td>Communication of MDM outcomes are communicated to the wider multidisciplinary team and to the patient/family and their general practitioner</td>
<td>+</td>
</tr>
</tbody>
</table>

Benefits
Every child diagnosed with cancer will be considered from a range of viewpoints at diagnosis from the leading experts in paediatric oncology in Victoria. Timely, equitable and effective best practice will be delivered in the right place at the right time – supporting best outcomes. The multidisciplinary meeting provides for promotion of shared learning and professional development opportunities for all health services involved.
Appendix 6: Minimum nursing competencies for Victorian health services providing paediatric cancer care

Rationale
Paediatric oncology nurses require a comprehensive educational foundation in how to best care for their patients’ complex needs and demonstrate the ability to apply this knowledge rapidly into clinical practice. To ensure the safe administration of therapeutic agents and the assessment and management of therapy-related complications minimum nursing requirements are essential. Inadequate education and experience of nursing staff can contribute to high levels of risk when administering medicines that have a low therapeutic index. Providing education and support built on expert knowledge of paediatric oncology is a core responsibility of nurses. It is an important factor in reducing distress, facilitating coping and promoting resilience and wellbeing in patients and their families.

<table>
<thead>
<tr>
<th>Recommendations</th>
<th>Service level</th>
</tr>
</thead>
<tbody>
<tr>
<td>All nurses should complete an education program before administering anti-cancer therapy</td>
<td>6 5 4 3</td>
</tr>
<tr>
<td>A competency program should include (but not limited to) safe handling, cell biology, overview of specific therapies, side effects of treatment, clinical trials and managing toxicities, all defined within the health service scope of practice</td>
<td>✗ ✗ ✗</td>
</tr>
<tr>
<td>All nurses should complete an education and training program for caring for children with cancer</td>
<td>✗ ✗ ✗</td>
</tr>
<tr>
<td>Minimum training should include cancer types, side effects, treatments and supportive care</td>
<td>✗ ✗ ✗</td>
</tr>
<tr>
<td>Demonstrate an understanding of dosage calculation and administration of medications to children, including methods to achieve compliance</td>
<td>✗ ✗ ✗</td>
</tr>
<tr>
<td>Demonstrate competency in basic paediatric life support and be aware of the normal observation ranges of children based on age and act appropriately on the findings that fall outside these ranges</td>
<td>✗ ✗ ✗</td>
</tr>
<tr>
<td>Be able to recognise the growth and development patterns in children and how they impact on clinical care</td>
<td>✗ ✗ ✗</td>
</tr>
<tr>
<td>Be able to communicate with children at an age-appropriate level, including the use of assessment tools to evaluate symptoms</td>
<td>✗ ✗ ✗</td>
</tr>
<tr>
<td>Be able to demonstrate the process of consent in children and adolescents, and be aware of the need to advocate and assist in communicating needs</td>
<td>✗ ✗ ✗</td>
</tr>
<tr>

<td>✗ ✗ ✗</td>
</tr>
<tr>
<td>Facilitate and support family-centred care, recognising the impact of hospital, home, family and community on children and families</td>
<td>✗ ✗ ✗</td>
</tr>
</tbody>
</table>

Benefits
Appropriately trained and experienced nurses will provide optimal care to paediatric oncology patients, reduce the risk of adverse events and contribute to improved outcomes. Experienced oncology nurses will facilitate timely assessment and management of treatment-related toxicities. Quality of life for patients and families will be maximised through support and interventions provided by appropriately trained and experienced nurses.

Appendix 7: Minimum pharmacy requirements for Victorian health services providing paediatric cancer care

Rationale
Chemotherapy is one of the main treatment modalities in paediatric oncology. Many regimens are complex and intensive, associated with a high risk of morbidity and mortality due to their narrow therapeutic index, demanding support from staff who are appropriately trained in the ordering, preparation, transport, delivery and education of chemotherapy. There is a need to educate and support families in the home administration of many chemotherapy agents to children, often administered over long periods of time. In an era of new targeted therapies, staff responsible for the care of children and adolescents with cancer require a thorough understanding of both conventional and novel agents. Fluctuating weight-based dosing and issues of patient compliance with medication (particularly in young children) drive the demand for an on-site paediatric oncology pharmacy to lead interventions to mitigate risk and promote good outcomes.

</tbody>
</table>

Benefits
Consistent and safe care within and across health services in managing chemotherapy mitigates risk, avoids delays to treatment and promotes compliance to the treatment plan. This will support reductions in morbidity and mortality, lead to better clinical outcomes, promote better symptom control and contribute to a better health-related quality of life for patients and families during treatment.
Appendix 8: Minimum psychosocial requirements for Victorian health services providing paediatric cancer care

Rationale
The diagnosis of a child with cancer is a stressful experience that can potentially disrupt the family system. Literature demonstrates the emotional, financial, social, physical and mental vulnerability of patients, parents and caregivers of children with cancer. Providing psychosocial services to children and adolescents with cancer and their caregivers ensures the greatest quality of life for patients and their families during treatment and through survivorship.

</tr>
</tbody>
</table>

Benefits
Early identification of psychological stressors in patients and their families enables health services to provide more effective therapeutic interventions. An on-site social work service ensures patients and their families have access to financial and practical assistance, counselling and community and peer support programs. Interventions will reduce psychological distress and promote quality of life in patients with a cancer diagnosis, and their families.

Appendix 9: Minimum radiation oncology requirements for Victorian health services providing paediatric cancer care

Rationale
Radiotherapy (RT) is an essential part of paediatric oncology care. New methods of delivery, completion of the first generation of paediatric clinical trials involving 3D conformal RT and intensity-modulated RT, and the emergence of proton beam therapy have bolstered the use of RT by decreasing side effects and total dosage without affecting local control of disease. Individualised treatment, concurrent chemotherapy ‘sensitisation’ and reduction of RT target volumes have been tested in clinical trials with emerging success, arguing its case as a continuing standard of treatment in paediatric oncology. Many centres have a shared agreement between adult and paediatric services for providing RT services, thus the importance of documenting minimal requirements in service and infrastructure is amplified.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Identified paediatric radiation oncologist lead for cooperative clinical trials purposes</td>
<td>6</td>
</tr>
<tr>
<td>Appropriate technical staff, state-of-the-art equipment and facilities to provide high-quality, ultra-conformal RT, including moulding, 3D-computed planning and treatment delivery systems</td>
<td>6</td>
</tr>
<tr>
<td>On-site or timely access to paediatric anaesthetic services for providing sedation/general anaesthesia to infants and younger children receiving RT</td>
<td>6</td>
</tr>
<tr>
<td>Child-friendly environment that meets with the RACP standards for the care of children and adolescents in health services, spatially and temporally separated from adult services</td>
<td>6</td>
</tr>
<tr>
<td>On-site access to paediatric emergency and resuscitation guidelines, with appropriate training of staff in paediatric advanced life support</td>
<td>6</td>
</tr>
<tr>
<td>Attendance of the RT team at paediatric cancer service multidisciplinary meetings, as well as established relationships with paediatric medical imaging and palliative care</td>
<td>6</td>
</tr>
<tr>
<td>Compliance with all national legislative requirements for an RT service</td>
<td>6</td>
</tr>
<tr>
<td>All palliative radiation delivered to children remains under the leadership of the level 6 medical multidisciplinary team</td>
<td>6</td>
</tr>
</tbody>
</table>

Benefits
Providing optimal RT interventions for each patient reduces treatment-related morbidity and improves outcomes. Improved compliance with, and timely access to, therapy with improved linkages with children’s cancer services is also of benefit. Full documentation of interventions for late-effects support and meeting the demands of patients enrolled on clinical trials is a priority.

This is a high level summary of the minimum radiation oncology requirements. A comprehensive service capability framework for Victorian health services providing radiation oncology for children and adolescents with cancer is under development.
Appendix 10: Minimum surgical requirements for Victorian health services providing paediatric cancer care

**Rationale**

Nearly all children with a cancer diagnosis will require some degree of surgical intervention in their treatment, such as biopsy and diagnostics, nutritional support, line access and surgical resection. Timed surgical interventions are often part of the planned treatment protocol. Surgery is also often used to support staging and diagnosis. The level of expertise in paediatric neurosurgery has been demonstrated as an important determinant factor in outcomes for children with central nervous system (CNS) tumours. The volume effect in paediatric oncology has also been demonstrated to improve patient outcomes, particularly where surgery is part of a larger multidisciplinary structure, encouraging subspecialty surgical disciplines to be centralised within tertiary referral centres. In lower risk cases, surgery that is protocol-driven may still be a predictive factor in ensuring good outcomes across both high and low volume centres.

**Minimum requirements**

<table>
<thead>
<tr>
<th>Minimum requirements</th>
<th>Service level</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>6</strong></td>
<td></td>
</tr>
<tr>
<td>Emergency theatre available 24/7 on site</td>
<td></td>
</tr>
<tr>
<td>Timely access to urgent operating sessions</td>
<td></td>
</tr>
<tr>
<td>Dedicated anaesthetic list for bone marrow biopsy and intrathecal therapy</td>
<td></td>
</tr>
<tr>
<td>Paediatric surgeons and other surgical staff providing care to children with cancer should be part of a paediatric oncology multidisciplinary team meeting structure</td>
<td></td>
</tr>
<tr>
<td>Defined surgical and early diagnostic biopsy of children with a suspected or known malignancy should be undertaken by surgeons trained in the paediatric oncology field or other appropriate surgical specialties as defined by the location of the disease</td>
<td></td>
</tr>
<tr>
<td>Neurosurgical facilities must have access to paediatric intensive care, as well as experienced paediatric anaesthetic staff</td>
<td></td>
</tr>
<tr>
<td>All planned surgical interventions in solid and CNS tumours should be discussed within a paediatric oncology multidisciplinary team meeting structure and ideally be protocol driven</td>
<td></td>
</tr>
<tr>
<td>Timely access to surgeons (FRACS or equivalent) with experience in managing children and adolescents with cancer in orthopaedics, urology, neurosurgery, ophthalmology, ENT, plastics and general surgery</td>
<td></td>
</tr>
<tr>
<td>Postoperative care should be supported by properly trained and experienced paediatric nursing staff, in line with the level of care they are providing</td>
<td></td>
</tr>
<tr>
<td>Timely access to postoperative support (such as physiotherapy and rehabilitation services), particularly when surgery involves the limbs, head, neck and CNS</td>
<td></td>
</tr>
</tbody>
</table>

**Benefits**

Children with cancer that have protocol-driven surgery that is discussed within a paediatric oncology multidisciplinary team will have improved outcomes and reduced long-term side effects. These benefits are of particular importance in tumours with a volume effect, such as CNS, bone tumours and sarcomas.

---

**Glossary**

**Biotherapy**

‘A type of treatment that uses substances made from living organisms to treat disease. These substances may occur naturally in the body or may be made in the laboratory.’

**Chemotherapy**

‘A drug or combination of drugs used to destroy malignant cells. It can cure some types of cancer and in some cases it is used to slow the growth of cancer cells or to keep the cancer from spreading to other parts of the body.’

**Clinical trials**

‘Research investigations in which people volunteer to test new treatments, interventions or tests as a means to prevent, detect, treat or manage various diseases or medical conditions.’

**Critical mass**

A minimum number of patients required to sustain a specific healthcare service.

**FRACS**

Fellow of the Royal Australasian College of Surgeons.

**HSCT**

Haematopoietic Stem Cell Transplantation. The transplantation of stem cells, derived from bone marrow, peripheral or cord blood, to be used in the treatment of cancer and other diseases.

**Multidisciplinary meeting**

A regularly scheduled meeting of core and invited team members for the purpose of prospective treatment and care planning of newly diagnosed cancer patients as well as those requiring review of treatment plans or palliative care.

**NATA**

National Association of Testing Authorities: Authority for ensuring adherence to national standards, with particular reference to compliance in laboratory accreditation.

**On site**

‘Services located within the institution or adjacent campus.’

**PACS**

Picture archiving and communication system: Availability to share medical images across sites electronically via a host.

**Paediatric**

Within the context of this document, a child or adolescent under the age of 16 years.

**PICS**

Paediatric Integrated Cancer Service

**Psychosocial**

‘Treatment that is intended to address psychological, social and some spiritual needs.’

Part 2: Evidence guide for the service capability framework
1.0 Introduction

This guide provides a summary of the evidence reviewed in the development of this service capability framework for Victorian health services that provide primary treatment and shared care to children with cancer. The purpose of this review was to gather evidence to support the rationale and recommendations made within the framework.

2.0 Contributing evidence in developing the service capability framework

Seven published guidelines supported paediatric oncology service capability as a whole. In addition, there is evidence and research that documents the rationale underpinning service recommendations for individual disciplines in paediatric oncology, and these are included in this evidence guide. Collectively, they support and inform the final structure of the framework.

(i) Developed by the UK National Health Service's National Institute for Health and Clinical Excellence (NICE) in 2005, titled Guidance on cancer services: Improving outcomes in children and young people with cancer: The manual. This comprehensive evidence-based guide encompassed all areas of paediatric oncology. This guide has been used to implement a service delivery framework across the UK, and remains the most current version to date.

(ii) Published in 2004, a policy statement from the American Academy of Pediatrics (AAP) entitled Guidelines for pediatric cancer centers. The purpose of this statement was to delineate the personnel and facilities that are required to provide state of the art care in paediatric oncology.

(iii) The Children's Oncology Group's (COG) personnel and service requirements for COG member institutions. This guideline was based on the 2004 guidelines from the AAP, and was revised in 2012.

(iv) Standards of treatment and care guideline from the International Confederation of Childhood Cancer Parent Organizations, sponsored by the International Society of Paediatric Oncology (SIOP). This guideline was developed to guide services in providing family-centred care in paediatric oncology.

(v) Developed by SIOP Europe, this guideline defines the minimum standards of care recommended for paediatric oncology in targeted EU member states but acknowledged that it had potential for widespread use.

(vi) A service capability framework published by the Queensland Paediatric Haematology Oncology Network (QPHON). The children's cancer services 'module' was designed to describe service requirements for the overall care of children with cancer, and focused on the model of shared care. The Victorian SCF closely reflects this module.

(vii) A Dutch paper offering a list of recommendations for providing high-quality care to children with cancer, prioritised by a panel of paediatric oncology experts from all centres in the Netherlands. The recommendations were developed from an extensive search of the literature.

3.0 Evidence for rationale and requirements in specialised services

3.1 Service requirements for oncology pharmacy

The minimum requirements for a paediatric oncology pharmacy service were drawn from several position statements and guidelines, including NICE, AAP and COG, as well as the work from organisations such as the American Society of Clinical Oncology, The Clinical Oncological Society of Australia, the UK National Chemotherapy Advisory Group and the Society of Hospital Pharmacists of Australia.

3.2 Service requirements for managing the late effects of cancer therapy

There is high-quality work published by the Childhood Cancer Survivor Study Group in North America supporting the need for a late effects service. The minimum requirements for providing a late effects service, including the measurement of interventions, has been derived from literature such as research into the outcomes of the COG late effects guidelines and national guidelines from the UK and North America. Also utilised is the Livestrong 'Essential Elements of Survivorship Care Meeting', held in Washington DC in 2011, comprising 150 leaders in the field (including Australian representation) who, together, documented a consensus on the requirements of a late effects service, under a 'must', 'should' and 'drive' model.

3.3 Service requirements for laboratory

The published guidelines from centres including COG, NICE and AAP were used to outline the minimum laboratory services. Pathology services are also accredited through national bodies such as the National Association of Testing Authorities Australia (NATA) and the Royal College of Pathologists of Australasia (RCPA). Some papers recommended the majority of these services be collocated in the primary treatment centre, enabling rapid diagnosis and avoiding delays to treatment.

3.4 Service requirements for medical imaging

Support for minimum recommendations for a medical imaging service were adopted from the main published guidelines, as well as a joint taskforce report from COG, and a feature article from the Radiology Clinics of North America.

3.5 Service requirements for radiation oncology

In addition to the major guidelines, the Royal College of Radiologists (UK) and the QPHON have defined the minimum needs of a radiation oncology service for children. The COG also produced a five-year blueprint for radiation oncology, published as a series of articles in 2013. Because of the nature of most services being collocated in adult hospitals, it is important for the service to adhere to guiding principles of caring for children in healthcare settings.

3.6 Service requirements for multidisciplinary meeting structure

The rationale for using a multidisciplinary meeting in cancer care has been well documented. Further definition of a multidisciplinary meeting to discuss care of all patients at a central meeting has also been shown to improve outcomes. Minimum requirements for establishing a multidisciplinary meeting have also been extensively published to support its use in paediatric oncology care.

3.7 Service requirements for nursing

Through the work of collaborative groups such as the Association of Pediatric Hematology Oncology Nurses, the COG, NICE guidelines and the Australian New Zealand Haematology Oncology Group (ANZCHOG), there is evidence to support defining the service requirements for paediatric oncology nursing.
3.8 Service requirements for clinical trials

The COG defines the minimum requirements for a clinical trial unit in paediatric oncology. The COG also has a defined five-year blueprint for clinical trials. NICE, AAP and the Australian Therapeutic Goods Administration have listed demands for a trials service. Clinical trials in Victoria are required to adhere to the requirements of the Victorian Health Consultative Council for clinical trials.

3.9 Service requirements for psychosocial services

There is published work examining the psychosocial impact of a cancer diagnosis on the lives of patients, siblings, parents and caregivers, identifying the need for a service to provide early identification and interventions. Minimum requirements for psychosocial services are defined within the COG, NICE and AAP guidelines, in addition to JDRP.

3.10 Minimum service requirements for surgical services

Data outlining outcomes for high-volume centres following cancer surgery is well documented, although not well translated to the paediatric model. However, the case for similar outcomes across low- and high-volume centres may be attributed to increased use of protocol-based therapy in the paediatric setting versus the adult setting. High-volume centres also provide a more multidisciplinary team approach to management with greater overall outcomes. High-volume centres have been shown to correlate with improved outcomes in neurological interventions for paediatric central nervous system tumours. Minimum requirements for surgical services are defined in the COG and AAP guidance, as well as work from the Society of British Neurological Surgeons for neurosurgical requirements.

3.11 Miscellaneous

Other elements of service capability are addressed by Department of Health and Royal Australasian College of Physicians papers and policies such as managing palliative care, intensive care recommendations and further work on the care of children in hospital. Infection control guidelines and recommendations are also nationally based and included in this evidence guide. The rationale for the benefits of shared care arrangements has also been addressed. Accreditation guidelines for transplant care under the Foundation for the Accreditation of Cellular Therapy (FACT) are used to define a stem cell transplant service.
